Cal OES Coastal Region

San Francisco Bay Ferry Service Disruption

Due to major engine maintenance, the SF Bay Ferry will be out of service for the 0800 hours Vallejo departure and 1730 hours SF Ferry Building (SFFB) departure for the next two weeks. From 07/11/16 through 07/22/16, there will be two buses serving the 0800 hours Vallejo departure and two buses serving the 1730 hours SFFB departure.

San Mateo Bridge Lane Closure

On 07/13/16 and for the next five nights (7/13-17/16) Caltrans will close two lanes of the San Mateo Bridge span in order to make permanent repairs to the bridge deck. Crews will be repairing a hole that opened up on the westbound deck, just east of the high-rise section last month. Only two of the three westbound lanes will be closed. The first lane will be closed at 1900 hours. The second lane will close at 2200 hours. The third lane will remain open at all times. The two lanes will remain closed until 0500 hours every day during construction.

- None reported.

WEATHER OF CONCERN

Weather of Concern

- Fire Weather Watch in effect from 0500 to 2100 hours Sunday for areas in Kern and Tulare Counties
- Fire Weather Watch in effect from 1300 to 2200 hours Sunday and Monday for areas in Lassen and Modoc Counties
- Fire Weather Watch in effect from 1000 to 2100 hours Monday for areas in Nevada, Placer and El Dorado Counties

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

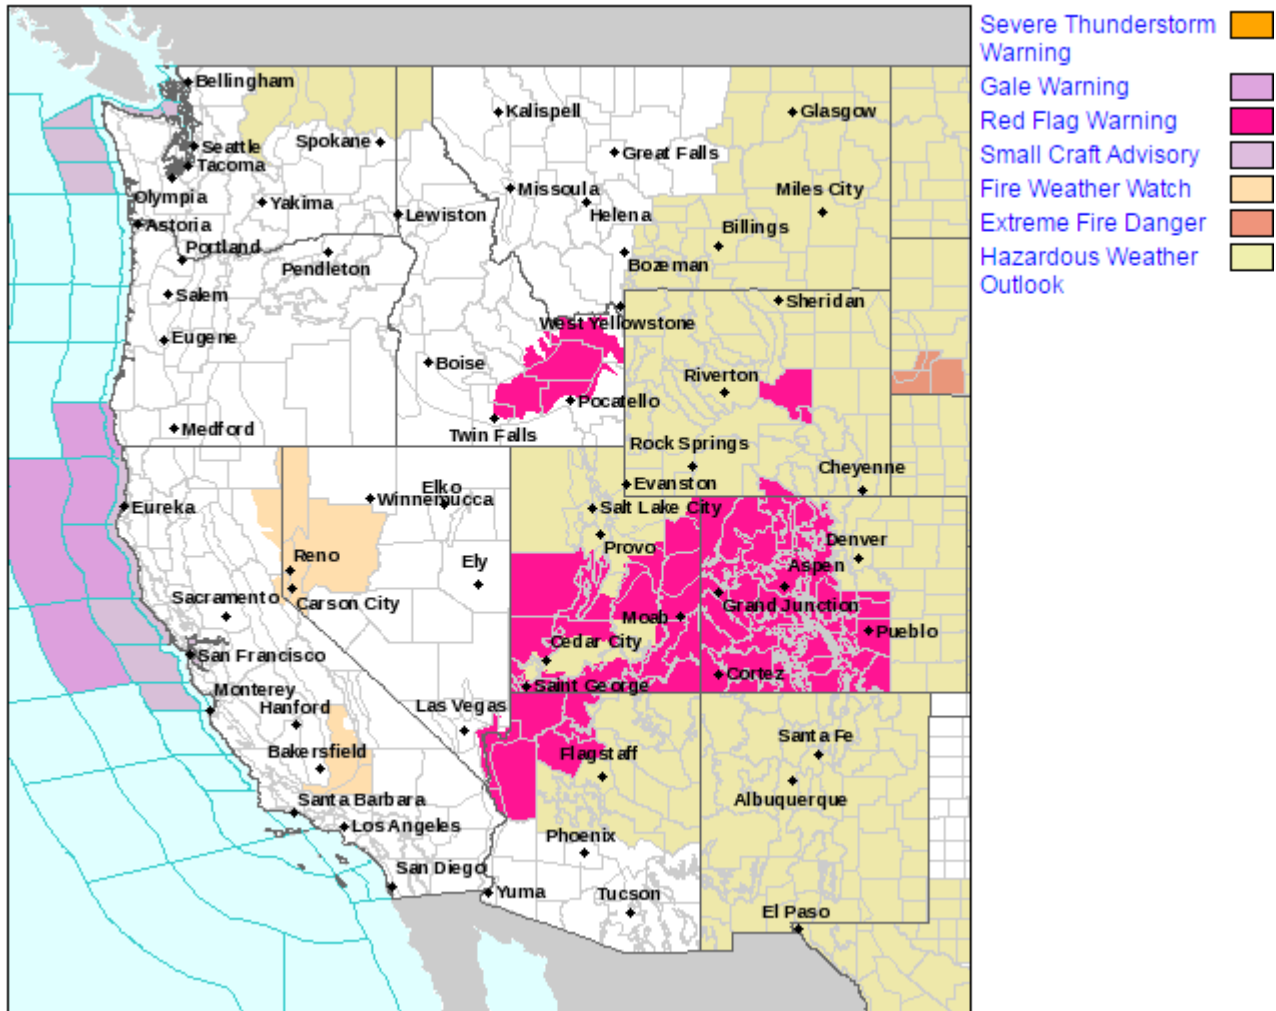

NORTHERN CALIFORNIA

A large area of low pressure will remain in place over the Pacific Northwest through Tuesday. Strong high pressure will remain stationary over the Southern Plains during this time. This pattern will produce a moderate to strong southwest flow over Northern California, and through Tuesday the low pressure will have more influence on our weather. There is a slight chance of afternoon showers or thunderstorms in the Northwest Mountains Sunday through Tuesday. Any thunderstorms or showers that develop seem likely to produce wetting rain (at least 0.10"), but any lightning that occurs could still be a mix of wet and dry. Southwesterly winds from the higher terrain of the Sierra (5000'+) and east into Northwest Nevada will gust to 30-40 mph Sunday and Monday afternoons. The minimum afternoon RH in those areas will be 8-18%. Temperatures will be near normal today, then drop to 5-10 degrees below normal Sunday through Tuesday. The trough will weaken beginning Wednesday as the Southern Plains high pressure builds west toward the Desert Southwest. This will lead to a warming trend with lighter winds for Northern California Wednesday through Friday. Most areas will have seasonably low afternoon RH and overnight recoveries with areas of single digit afternoon lows and moderate to borderline-poor overnight recoveries. A possible frontal passage next Saturday could bring isolated thunderstorms in the north followed by a northerly downslope surface wind pattern.

SOUTHERN CALIFORNIA

Another in a series of unseasonably deep troughs continues to march into the Pacific Northwest early this morning. This trough will bring breezy and cooler weather to the district the next few days. High temperatures will be a couple of degrees cooler each day through Monday when highs return to near normal readings. In general, highs will range from the 70s along the coast to the mid 90s in the valleys to around 100 in the San Joaquin Valley. The low desert will be up to 110 the next few days. West winds of 15-25 mph with gusts to 40 mph will be possible in the Kern County Mountains, the Antelope Valley and the north sides of the Angeles and San Bernardino National Forests. The strongest winds will likely occur throughout the day Sunday when pressure gradients are maximized. These areas may see afternoon RH dip into the single digits due to down sloping winds Sunday afternoon. Next week, a warming trend is expected as high pressure over the southern plains slides westward. High temperatures will be back over 100 in the inland valleys and lower foothills with less night through morning marine layer stratus. A minor amount of moisture may allow for a handful of storms near the Colorado River during the middle of next week. The rest of the area will not see any convection for the foreseeable future.
